121 tribal peoples has been most marked, special circumstances attend the disruptions. In most of Africa, money wages and industrial work have been accompanied by the separation of the wage worker from his village, with his consequent removal from the sanctions and social controls of the tribal society."[3]

121 177 166 The pronounced cultural and social changes observed among the Santal should add to the evidence indicating the significance of migration. In addition the microscopic form of anthropological inquiry used with the Santal reveals something more of the *modus operandi* of migration to industrial employment than can be seen at the macroscopic level at which Weber operated.

Traditional Marriage Forms

177 184 583 The Santal have a number of legitimate or quasi-legitimate forms of marriage. It is the manner in which a marriage is contracted, i.e., whether or not it is arranged, and the way in which it is celebrated, which define the form. The various forms are graded by cost and elaboration of the ceremonies performed, and differ significantly in the ceremonial content. There are relatively few arranged marriages among Santal industrial workers living in *bustees* as compared to those among the Santal living in their traditional native villages. The results of my research into this difference indicate that it is the result of migration to industrial employment, that the shift to unarranged marriages among the workers is the result of weakened bonds with both kin and villages, and finally that this is the result of neither migration nor industrial employment singly, but rather of the two together.

583 192 177 The marriage form with the highest prestige and involving the greatest expenditure is known as *duar itut' sindur* ("placing

When I saw the jet-black people, with a necklace of white beads about their necks, and their peculiar dress, if dress it might be called, I was more confirmed in my opinion. I immediately alighted from my horse and inquired if that was a village of the Coles, but was not a little surprised at being so soon transported from the Oriyas to a people who could not understand a word I said. I looked about with astonishment at the romantic change, till at length I found an old man who could speak broken Oriya, of whom I gained the following information. He said they were not Coles, but Santals."[1] The author of the *Annals* relied largely on information supplied to him by the Rev. Jeremiah Phillips, who was a pioneer in the study of the language. The following occurs in the Annual Report of the mission for the year 1846: "During the past year Brother Phillips has acquired some knowledge of the language of this people (the Santals), by which he has been able to commence efforts for their improvement, which it is believed will result in great good to this hitherto neglected portion of the inhabitants of Orissa. He has performed a journey of some two or three weeks among them, which was very serviceable and interesting to him. He has published a tract of 8 pages, which is the first work ever published in the Santal dialect."

The Santals have been living in South-West Bengal for at least three hundred years. It is probable that they have been there for about five hundred years. There is agreement among the authorities that they moved to their present sites from the more hilly districts of Chota Nagpur farther west. It has been computed that the village of Rangibari in Bankura district is over three hundred years old.[2] Such a long period of residence on the one site is exceptional; the great majority of the Santal villages of today cannot look back on so long a history. Wherever a tradition regarding the founders of a village has survived, one finds that the first settlers moved to their present abode from no great distance away. Regarding Barikul, we are told: "The one who tied the brown hen here was Haru Mañjhi, whose family came first from Aurasuri in Bogri—a distance of about thirty-five miles. They say that formerly there were many wild elephants in Bogri, and for fear of the elephants many of the inhabitants fled to other parts. Sorup and Haru

[1] This and the following quotation I owe to the kindness of the Rev. A. A. Berg, who enabled me to see early reports in his possession.

Sorup and Haru Mąñjhi were two brothers. Sorup Mąñjhi left Bogri because of the elephants, came to Raipur and settled. He had established himself well at the end of a year or two, so he told his younger brother: 'Leave Bogri, where the elephants are on the increase. Some day you will be trampled on and killed. Come with me.' Haru Mąñjhi thought to himself: 'True enough, many men have been killed; perchance they will kill me.' Thinking thus, he took all his children, left Bogri and came to Raipur. From Rautora in Raipur they established a village in Barikul, Sorup Mąñjhi saying to his brother: 'Go to, brother, put up your huts and stay at Barikul.' Then Haru Mąñjhi went out with his children, his cattle and his goats, and built his huts there. He had four boys and two girls; the girls they brought with them from Bogri, and the four boys were born in Barikul. He obtained sons-in-law for his daughters to live with them, and one or two tenants came together. In this way the village increased to many houses." Wild elephants, of which there are not so many now as formerly, do still on occasion cause great damage to ripening crops. Barikul was founded five generations ago, a period of about one hundred years. At that time there was also a possibility that by moving his abode the Santal could regain a measure of independence. The Santals have been spoken of as formerly "nomadic".[1] It may be that in the strict sense of the word they were in some remote period nomads. For any period of which we have record, however, they have been agriculturalists, though food-gathering and hunting provide them with important subsidiary occupations. Their migrations have been due to pressure of one kind and another. They prefer to move to forest lands where they will have a hard struggle to establish new settlements than to remain where they have to defend their holdings and their livelihood against hostile forces, whether these be wild animals, malignant actions directed against individuals or the community from the unseen world, or the oppression of landlords and moneylenders.

The last cause operated to produce a great northward movement in the early decades of the nineteenth century, and finally goaded them into rebellion. The Santal rebellion has been frequently described.[2] It took place in an area remote from the Bankura district, but it has to be mentioned because it created

his courtyard after the midday meal used to make sure of rising at the right time by telling his children to waken him when the shadows had reached a certain spot.

During the night the time is indicated not only by the position of the moon but also by the stars, and particularly by reference to the constellation Pleiades. There are at least two myths relating to the sun and the moon. In the one the sun is male and the moon female, while the stars are their children. The absence of the stars from the sky in daytime is explained by a story that they made a pact to eat their children. The sun carried out the bargain and so there are no stars visible by daylight, but the moon evaded her promise and so some of the children survived. The other version says that both the sun and the moon are male; they became related to each other by marrying each other's sisters. Only a few of the stars and constellations are named. The Pleiades have the same name as one of the clans; the Milky Way is known as the "cow track", and the Great Bear is the "old woman's bed".

Between the harvest and the Spring festival, a period which corresponds with the cold weather, the villages present a deserted appearance, due to the annual migration to the east for work in the harvest fields of the Ganges delta. This seasonal migration, dictated by economic necessity, plays an important part in the life of the area. Farther to the north many Santals work in the coal-mines round Asansol, while to the south labour is drawn to the great steel town of Tatanagar. In this area migration to industrial centres is rare; the Santals regard the conditions in industrial towns as highly dangerous to health, and they affirm that nothing will induce them to go there. The same reason, however, does not prevent them from leaving their own villages in a non-malarious tract of country for the malarious rice-growing areas farther east, in consequence of which the money earned is often more than spent in the expenses of protracted illness and long periods of idleness. Each village organizes its own party of migrants, who go to work for the same masters year after year. The wages they receive are more than double what is paid in their own locality, and so they earn the money required to pay rent, to meet social expenditure for marriages, and to pay off old debts. The homes are left in charge of the aged, and some of the children are left behind. The villages are denuded of able-bodied men and women, apart from a few who do not need to go. Family parties travel together, babies and very young children being carried

St Culshaw M-S (1932-1943) 1949 AW42 Santal AW42

by their parents. It is no uncommon sight to see a man striding along the road with a carrying pole across his shoulders; in the basket slung from one end he carries some of the family cooking utensils, while the youngest member of the family sits confidently in a basket at the other end. The immediate economic advantage of this annual migration, without which they might be forced to leave their present homes with dire consequences for their tribal stability, is secured at a heavy price. In addition to the toll on their health, tribal sanctions are loosened away from the village. Offenders against the tribal law, runaway brides, women accused of witchcraft, and many others who do not wish to submit to discipline can find a refuge away from their homes, and each year the number of those who elect to stay "east" is growing.

The older generation regard the yearly exodus as the prime cause of moral laxity because it flouts an old taboo. Formerly no Santal was supposed to cross the Damodar river, which forms the northern and eastern boundary of the Bankura district. When at first men were drawn away to work over the river the women were not allowed to accompany them. The reason given for this prohibition was that by crossing the river they would bring misfortune on themselves and their villages. The underlying causes may be connected in part with the fact that the tribal gods are forest gods and could not protect them on the other side of the river, where there are no forests; and partly linked with the fact that the Damodar has an important place in their customs for disposing of the dead.[1] Whatever they be, the old taboo is now ignored.

During the last few days of *Pus* (mid-January) and at each month's end till the Spring festival, parties of men, women and children can be seen returning along the roads in single file, the women always in front. They are bent on reaching their own villages before the festivities which mark the turn of the month. The old people watch for their return and the relieving of their responsibilities. They enjoy greater leisure and may be seen more often squatting on the narrow ledges that surround the houses, sunning themselves. As men and women return from the east they find employment chiefly in felling trees and in carting both wood and leaves to the railway. For many years the traditional attitude of the Santal to the forest has been to make clearings and begin cultivation. The forests of the area are privately owned by the landlords, and they are exploited for their timber.
